DETAILED ACTION

Allowable Subject Matter

Claims 1 – 26 are allowed.

The following is an examiner's statement of reasons for allowance: As to claims 1 – 26, the prior art fails to disclose a method for determining a width of a soft zone area of a partially hardened metallic area comprising a single workpiece individually moved relative to the multifrequency eddy current sensor; generating a measuring signal in the multifrequency eddy current sensor, in which the spatially limited eddy current field has a greatest extension a longitudinal direction of a surface of the workpiece, the greatest extension of the eddy current field being greater than a maximum extension of the soft zone area along the longitudinal direction of the surface of the workpiece; and measuring a number n of workpieces for calibrating purposes, using the measuring signals of the n workpieces to plot a calibration curve using a predetermined standard size of a width of the soft zone with a desired size of an extension oriented in a longitudinal direction of the soft zone area of the n workpieces, and assigning an absolute soft zone width to the measuring signals based on the calibration and which are obtained from each individual workpiece. These features taken together with the other limitations of the claim renders the claims allowable over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art of Record

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dabelstein et al. (6,576,877) is cited for its disclosure of an induction processing of a workpiece.

Nakamura et al. (6,287,009) is cited for its disclosure of a rotation speed detection instrument.
